- 5 or more years' experience in manufacturing setting.
- Experience managing audit and training programs requirements (internal & external).

2. Skills Required:

- Strong risk assessment techniques and experience in risk mitigation strategies.
- Strong interpersonal and communication skills and the ability to work effectively with individuals and teams.
- Skilled Microsoft Programs such as Excel, PowerPoint, Word, Outlook, etc.
- Ability to develop and present training / awareness programs and/or drills.
- Ability to use safety suite software.

3. Duties and Responsibilities:

- Be out in the Plant to observe, learn and continually improve current industrial hygiene programs within King Industries for production, maintenance, laboratory and warehouse.
 - Production- ventilation equipment, mounted metering devices (LEL & VOC meters).
 - Maintenance- air monitoring prior to, during, and after planned maintenance events.
 - Laboratory- oversee inspection, testing, and preventative maintenance of lab hoods throughout King Industries 16 labs and chemical hygiene plan (CHP).
 - Warehouse- ventilation equipment, air monitoring, and dust mitigation.
- Observe, learn, manage and recommend improvements for;
 - Personal Protective Equipment and Respiratory Protection Programs.
 - Risk Assessment programs.
 - Confined Space Program.
 - Noise Program.
 - Local Exhaust / Ventilation Systems.
 - HAZCOM program.
 - Chemical Hygiene Program (CHP).
- Create and maintain procedures, instructions, forms, documentation, monitoring schedules, and ensure employee awareness for all programs listed above.
- Create and maintain an internal audit program within the CHP.

- Ensure regulatory compliance / Alignment - OSHA, NIH, EPA.
- Maintain a high-level knowledge / awareness of regulations on worker protections.
- Develop and Present IH / CHP training programs.
- Manage and maintain SDS's for all chemicals handled on site.
